## Multi-disciplinary Management

The Royal London Dental Hospital has a dedicated multi-disciplinary team incorporating consultants in Orthodontics, Paediatric and Restorative Dentistry managing hypodontia patients. Working synergistically, this team ensures the provision of a first class service for these highly challenging patients. This clinic offers a referral service to a number of regional hospitals, specialist practices and primary care practitioners. In addition, a Hypodontia Network has been established enabling consultants to visit units across the southeast of England.

Running for the fourth time, this course aims to highlight issues relating to the management of hypodontia patients, from their childhood into their adult life. The need for a multidisciplinary approach in both the planning and treatment of these patients is emphasized.

The course will cover areas such as dental aesthetics, auto-transplantation and bone augmentation. It is therefore particularly relevant to FTTAs in Orthodontics and Paediatric Dentistry and Specialist Registrars in Restorative Dentistry. Delegates will also have the opportunity to carry out treatment planning exercises using records of patients previously seen at the Hospital.

There is no charge for this course and, as places are limited, early booking is advised.

We are grateful to American Orthodontics for sponsoring the course and providing refreshments and lunch.

Parmjit Singh  
FTTA in Orthodontics

This course will attract:

7 CPD credits

## Course Presenters

Ama Johal is a Senior Clinical Lecturer /Hon. Consultant Orthodontist and Orthodontic Clinical Lead for Hypodontia. He has lectured, both nationally and internationally, with over forty publications in peer-reviewed international journals. His specialist interests include the multidisciplinary care of patients with orthodontic-restorative needs and the treatment of sleep apnoea patients. He is associate editor of the European Journal of Orthodontics and is a provisional member of The Angle Society of Europe.

Gary Pollock is a Consultant / Hon. Senior Lecturer in Restorative Dentistry and Hon. Consultant at Southend Hospital for Hypodontia, Currently; he is Clinical Lead for Restorative Dentistry and Restorative Clinical Lead for Hypodontia, Cleft Palate and Dental Implants. He has been involved with the treatment of hypodontia patients for over 15 years and his main areas of interest are the surgical and restorative aspects of dental implants.

Shakeel Shahdad is a Consultant / Hon. Senior Lecturer in Restorative Dentistry. Apart from specialist restorative treatment, his areas of particular interest include implant dentistry and the management of complex restorative cases including functional and aesthetic rehabilitation of hypodontia patients. He is the Clinical Lead for postgraduate implant training and also runs a Specialist Restorative practice in the West End of London.

Ferranti Wong is a Senior Lecturer /Hon. Consultant in Paediatric Dentistry. His main areas of focus include the paediatric-restorative interface and the auto-transplantation of teeth. He also has an interest in the genetic pedigree and mode of inheritance of hypodontia.
